

2Touch POS Credit Card Integration

2TouchPOS integrates with major credit card platforms to streamline payment processing.

Here's what you need to know about the platforms for a successful partnership. As of January 2017 you have two options if you want integrated payments with your 2Touch POS software:

Option 1:

- Use the direct build-in solution. (No-3rd party software needed)
- This solution is from World Pay one of the largest and most trusted payment providers. This is the only direct integration available without a third party software.
- This solution supports EMV and Point-to-Point Encryption

Option 2:

- Use the 3rd party software Slipstream please see restrictions below.

Let's Touch Upon the Main POINTS for each Option:

Option 1: Using World Pay and the Direct Two Touch Integration

- 2Touch version 4 (v4) and higher is EMV compliant and has Point-to-Point Encryption.
- This direct integration means “no finger pointing” support. World Pay works directly with software developers and certifies each software solution to ensure compatibility. If any technical issues come up there is an entire development team and a fantastic Solutions Team; THERE WHEN YOU NEED THEM! This support can all be done through Pomodo, so you only have one phone number to call.
- A setup sheet for your account is received directly to Pomodo. We are with you every step of the way!
- 2Touch V4 Next Generation Payment Processing: By using a payment device with Point-to-Point Encryption you protect yourself from potential risks with a PCI Validated Point-to-Point Encryption (P2PE) Solution. P2PE protects cardholder data from the time you accept payment, to the point it's handed off for processing. The P2PE solution that we recommend is to protect your customer information and reduce your risk.

Option 2: Using another process with the Slipstream Software

- You or your new processor must purchase Slipstream processor along with the necessary support to implement the software within Two Touch.
- You must submit a Slipstream parameter sheet for the appropriate processor. The parameter sheets can be requested from Pomodo Support.
- You need to have Windows Version Win 7 or Win 10
- 2 Touch version lowest 3.03.3700 – highest 3.03.0063. You cannot upgrade beyond this point without moving to EMV. EMV is not supported through Slipstream.
- 2 Touch and/or hardware upgrade might be required to implement Slipstream. Pricing will vary based on how old your version of 2 Touch is.
- You can only batch out on the base station.

As of 9/1/2017 the current version of Slipstream is V 5.0.

If choosing Option 2, please sign below indicating that you understand the available options.
